Dear TripleTen Hiring Team,

I'm writing to apply for the Learning Experience Lead role. For the past four years I have designed, built, taught, and revised graduate courses in data science, machine learning, and AI at the University of Arizona. The role description reads like a summary of that work: end-to-end course design in new AI domains, AI-heavy design workflows, success metrics, and mentoring other designers.

I own courses end-to-end. I created INFO 511, our open-source foundational data science course. I built our neural networks course in a field that changes every semester, with gamified exams and free GPU compute for students. I also grew our industry-sponsored Capstone from seven students to more than one hundred, now the College's largest applied program. My job in Capstone is to turn sponsors' business problems into projects that student teams can scope, build, and ship. To support this work I have won about $368K in NSF computing awards as Lead PI, including the university's only competitively awarded NAIRR Classroom Pilot allocation.

AI tools run through my design process. My courses pilot Sol, an open-source agentic tutoring and feedback system that came out of my research. INFO 511 uses retrieval-augmented feedback, adaptive quizzes, and code-similarity checking. Assessment runs as automated test suites in GitHub Classroom, so students get fast feedback at any scale, and the professionals enrolled in my courses tell me the structure matches how they already work. Every course is versioned in public, and I revise each one every term based on what students did.

The parts of this role that interest me most are the ones I already do. TripleTen teaches complete beginners, and that is the audience I trained on: before my professorship I taught researchers with no programming background, and as a Carpentries Instructor Trainer I still train and certify new instructors in evidence-based, inclusive teaching. The role also asks for someone who defines learning metrics and iterates on them. I publish peer-reviewed research on measurement instruments, and I hold my courses to the same standards.

I would be glad to talk about what I could build with your methodology team. My portfolio for this role is at gregtchism.com/portfolio.

Warm regards,

Greg T. *Chism*, Ph.D.
